

ABSTRACT OF THE DISCLOSURE

A recording apparatus has a feeding unit (110) for storing and feeding a recording medium, a recording unit (120) for recording information on the recording medium having been
5 fed from the feeding unit, and a discharging unit (130) for discharging outside the recording medium having been transported through the recording unit. In the recording apparatus, a warping part (131a) for warping the recording medium and supporting parts (133) for supporting both side
10 edges of the recording medium warped by the warping part are formed on a guide member disposed downstream of the recording unit.
